It's been hailed as a game-changer, a get-out-of-jail-free card that would allow us to burn fossil fuels without precipitating dangerous climate change. But the potential for Carbon Capture and Storage (CCS) to clean up coal – the cheapest and dirtiest fossil fuel – is now in doubt

URGENT POSSIBLE - IS NOW IN DOUBT.

In recent weeks, it has become clear that a world-leading CCS project in Saskatchewan, Canada is struggling.

The country's largest coal-fired power plant, Boundary Dam, was retrofitted in 2014 with state-of-the-art technology in a bid to capture 90 per cent of its CO ...
